

## A Revolutionary Approach to Securing Your Applications

### Finally, an application security technology *that just works!*

Contrast™ is the first application security technology that sits inside your running web application. It can be installed in less than five minutes and is simple to use. Contrast automatically identifies and reports critical security vulnerabilities. You don't need to be a security expert — Contrast does the hard work and reports in clear, easy-to-understand ways. Whether you have one application or thousands, Contrast delivers.

#### Vulnerability Detection

Contrast performs intrinsic analysis from inside the application. This wealth of information provides unprecedented level of accuracy without false alarms.

#### Continuous Monitoring and Alerts

Contrast sits in the background of your application server and watches for vulnerabilities during the development and testing cycles so you can fix security bugs before they become risks to your business.

#### Automatic Portfolio

As you install Contrast on your application servers, results get correlated and Contrast creates a centralized inventory of your organization's biggest attack surface – your web applications!

#### Architecture Discovery

Contrast watches what external connections your application makes and creates a living architecture diagram for you.

#### Remediation Guidance

Contrast pinpoints the exact lines of code where security issues occur, includes the full HTTP request, and gives specific guidance on how to fix the problem. Contrast speaks the developer's language!

#### Library Analysis

About 80% of your software's code comes from libraries developed outside of your organization. There are no guarantees of quality or security. Contrast gives you "freshness" grades to make sure you're up-to-date on your libraries and lets you know which versions you're actually using.

## Why Contrast?

### Contrast was created by *the* application security experts

Aspect Security has been helping organizations worldwide to produce secure code for over 10 years and drastically improve their security posture. We are founding members of OWASP, the world's premier software security not-for-profit organization, which helps developers around the world to produce secure code.

### Contrast delivers accurate results in just minutes

Contrast is an innovative new Interactive Application Security Testing (IAST) solution. Simply download the plugin, install it on your server, and start finding vulnerabilities in a matter of minutes! Contrast will handle the hard stuff, like finding SQL injection in your code so that you can focus on developing. Whether you have one application or thousands, Contrast scales to your entire portfolio.

Awarded Gold medal for Best Web Application Security product at the 2013 RSA Conference.

## Supported Technologies

Contrast works on the most popular Java technologies on the market today. Our support for new technologies is growing daily.

### Supported JVMs

- Oracle JDK 1.5, 1.6, 1.7
- OpenJDK 1.5, 1.6, 1.7
- IBM 1.5 (2008+), 1.6

### Supported Containers

- JBoss 4.2, 6.1, 7, 7.1
- GlassFish 3
- Tomcat 4, 5, 6, 7
- WebSphere 6.1, 7, 8.5
- Jetty 6, 7, 8, 9
- WebLogic 11g, 12c

### Supported Frameworks

- Java EE
- Servlet/JSP
- Spring
- Hibernate
- Jersey
- Struts
- Struts2
- Wicket
- JSF

### Deployment Modes

- SaaS
- On Premises

Contrast takes less than 5 minutes to install so you can start getting the security results you need to do business safely.
