

SOLUTION BRIEF

SecOps experience

Respond earlier and slash false positives for SecOps teams

Identify, prioritize and mitigate application and API threats as they occur, and ditch the noise.

The problem: false alerts vs. stealthy threats

SecOps teams face mounting challenges in detecting and blocking application exploits. The complexity of modern applications, combined with an evolving threat landscape, overwhelms teams with excessive alerts and no context. Consider these key statistics:

- 99% of organizations [report](#) applications in production have four or more vulnerabilities
- 50% increase year-over-year in the [number](#) of zero-day vulnerabilities
- It takes up to 283 days to identify and contain a [data breach](#)

SecOps teams need real-time detection and response capabilities that cut through the noise and allow them to focus on genuine threats to their applications without guesswork or manual triage bottlenecks.

The Contrast solution

Contrast Security provides a proactive approach to application and API threat detection, embedding security directly into the applications themselves, ensuring that SecOps teams can act quickly and confidently. Key capabilities include:

- Real-time application attack detection and blocking:** Contrast operates from within the application, providing continuous visibility and blocking of both known and unknown vulnerabilities, including zero-day threats, in real time.
- Improved detection and response via integrations:** Contrast integrates with SIEM, CNAPP and XDR platforms, enriching attack intelligence and enabling faster, more informed security decisions.
- Comprehensive visibility into application and API attacks:** SecOps teams receive real-time alerts enriched with contextual information. This provides critical insights that significantly reduce time wasted chasing false positives and improve response accuracy.
- Guided runbooks for application incident response:** Clear, step-by-step remediation guidance ensures SecOps teams can quickly validate and contain threats, minimizing damage and response time.

By providing deep application insights and intelligent automation, Contrast reduces noise and enhances security teams' ability to focus on the highest-risk threats.

Transforming the SecOps experience

Contrast empowers SecOps teams by providing real-time detection, intelligent threat prioritization, and actionable response guidance. With this enhanced visibility and automation, security teams can reduce false alarms, focus on genuine threats and improve response times.

Reduce mean time to detect

Contrast reduces the time taken to identify application threats through embedded monitoring.

Decrease mean time to respond

Contrast enables faster response times, neutralizing threats with enhanced incident management processes.

Lower false positive rate

Highly accurate threat detection techniques lead to fewer false positives and more efficient operations.
